MR

Hi Vanessa,

What time is the meeting taking place? I have a commitment in the morning but can see if someone from our Capital Construction team can attend and present.

Thank you.

Hi David,

Thank you for the update. As you may be aware, OEPM has been convening a Construction Coordinating Committee (CCC) to help inform and manage the many construction projects taking place on and around the Park. Would you or someone from your team be open to providing an update on this project during our next CCC meeting taking place this Thursday? It does not have to be a formal or lengthy presentation, just an opportunity to review the project in a bit more detail to the group and answer any questions that may come up.

The Myfig folks presented last month and it was very helpful to understand the details and scope of the project as a group. This might be a good follow up presentation so folks at the park can understand this project as it relates to the various projects taking place on Fig.

Thanks!

-Vanessa

Ana/Vanessa/Bryce/Aaron - As you may know, USC is in the process of undergrounding utilities along our campus perimeter on Expo. Below is a recent email from our lead construction project manager regarding discussions Melinda facilitated with My FIG staff. Ramon mentioned that he has connected with OEPM, but we wanted to make sure you all had this information:

Please note following update on USC's construction activity overlapping with MyFig project.

Yesterday the city's MyFig project team issued the "OK" for USC/CCD to proceed with construction of Phase 1A of Electrical Undergrounding project.

- Intent is for USC to install new underground duct banks ahead of LADOT's MyFig Bike Lane Improvements on Figueroa at Exposition.
- City has given USC a limited timeframe to install Phase 1A.
- USC's work is offsite and will involve closure of curb lane on west Figueroa adjacent to Exposition - see attached diagram.

Notes:

- UPC Impact - Phase 1A USC Construction:
  - o Closure of single south-bound traffic lane on Figueroa (roughly along the length of Fertita Building east façade)
  - o North cross-walk at Fig/Expo will be closed to pedestrians
  - § Detour signage for alternate ADA accessible crosswalks will be in place.
  - o Right turn from south-bound Fig to west-bound Expo is OK.
  - o Temporary traffic signaling will be in place at N-W corner Fig/Expo.
  - o Work is on parallel track with LADOT crew.
  - o Traffic Control Plans are coordinated and dovetailed between USC and LADOT MyFig teams (Adam Driscoll is point of contact).
  - o Traffic control devices and detour of north crosswalk will be in place during Festival of Books event on April 22-23.
  - o Goal is to remove Traffic Control devices and open north crosswalk on May 11, before Commencement.

- Dates:

- o Phase 1A Start: Monday, April 10, 2017
- o Phase 1A Finish: Tuesday, May 16, 2017
- o Duration: Approx. 5 weeks
- o Working hours: per Noise Abatement Zone Ordinance
- § M-F, 7:00 AM to 6:00 PM
- § Sat 8:00 AM to 6:00 PM
